

Getting Acquainted with Your NOTEABLE™ Singing Mask

Before you do anything else:

Wash and air dry your Noteable mask, using unscented soap or detergent.

With a permanent marker, write your identification mark on the inside label.

Putting on your Noteable mask:

1. Hold the mask with the *Made in USA* label facing you. Gently bend* the nose strip at the top of the mask into a U-shape with the open end facing you.

2. Place the ear loops over and around each ear. Tighten the ear loops using the small sliders. Do not overtighten.

3. Shape the nose strip to your face, especially along the sides of the nose. Readjust ear loops for comfortable fit.

4. Tie the bottom straps behind your neck. Do not overtighten.

*Avoid bending the metal nose strip repeatedly.

Wash and air dry your Noteable mask between uses.

Note: This mask is NOT a substitute for medical grade N-95 personal protective equipment (PPE). No mask can be guaranteed to stop the spread of COVID-19. However, using the Noteable Singing Mask while following recommended CDC guidelines lowers that risk. Because of the mask's individual hygiene nature, all sales are final.

Final adjustment:

Ideally, the bottom of your mask should be about two fingers away from your chin.

Too high:

Loosen ear loops.
Tighten bottom straps.

Too low:

Tighten ear loops.
Loosen bottom straps.

More about Your NOTEABLE™ Singing Mask

This mask was developed with help from a group of singers who were devastated that choral music was curtailed by the COVID-19 pandemic. Not sing? Who could imagine such a thing?

After testing several designs and prototypes, and with input and feedback from singers, directors, aerosol engineers, and many others, we arrived at the mask you are holding.

We hope this mask will help you once again experience the joy of singing and of sharing that joy with others!

Your mask has been designed especially for singers to:

- Reduce or eliminate the frontal aerosol plume
- Direct exhaled air downward into mask material
- Provide an unobstructed breathing pathway
- Project the sound of singing outward
- Be comfortable to wear for extended periods of time
- Provide safety for the singer and for those nearby

The Noteable mask features a patent-pending design incorporating a double-arch fabric arrangement to create and maintain a breathing space in front of your nose and mouth.

Take a deep breath while wearing the mask. If the mask is not fully expanded in front, you may feel some fabric moving toward your mouth. In that case, just reach inside the mask and gently push the front out to create the breathing space. Isn't it wonderful to breathe so freely?

You may hear your own singing more prominently while wearing the Noteable mask. This is a normal perception because of the acoustical qualities of the mask design.

The Noteable mask has been tested for filtration collection efficiency by Colorado State University, with results indicating that the filtration of the mask captures more than 80% of aerosol particles three micrometers in diameter or larger.

The design at the bottom of the Noteable mask is a distinguishing feature to capture aerosol particles moving downward. This feature was tested in an aerosol engineering laboratory at Baylor University, with results showing that no particles three micrometers in diameter or larger were detected beneath the mask.

Now that you are acquainted with your Noteable mask, let's get back to singing!
